RE: Appreciation for the donation of two high-power semiconductor lasers

Dear Dr. Fomitchev,

We are extremely thankful for the donation of two lasers. We have received two 500-mW 405-nm semiconductor lasers. We are planning to use them to create gratings on photoresist-coated surfaces. These gratings will be used in student projects. Your donation will allow us to give our students a unique experience with working high-power semiconductor lasers.

We appreciate your support for educational institutions. We will be happy to share with you the pictures of the setups created, and any publishable results obtained by our students. We will acknowledge your support in any publication resulting from using the donated lasers.

Best regards,
