

## Associazione Culturale comPVter

We think that this opportunity could be very interesting adding your laser in our “3D printer first discover experience”.

We usually use:

- Inkscape to introduce 2D cad
- Tinkercad for the first step in 3D modelling objects.

We have a [3Drag](#) printer that could be a perfect machine to equip with a small laser for cut cardboard.

All our events are free for the children, following the CoderDojo model. Our mentors are all volunteers.
